### Quick-Dry

Quick Dry is the acquisition layer placed directly below the top sheet where the urine enters the pad. It quickly absorbs urine away from the skin and into the pad and prevents the urine returning to the surface. It can handle several gushes of urine without affecting how the pad works which results in exceptional skin dryness and leakage protection for the user.

### Active Zone

The Active Zone is an area centred in the middle of the pad, which provides high absorption where it is really needed. This provides exceptional skin dryness and improved leakage protection for the user.

### Natural Odour Protection

Natural Odour Protection reduces the risk of unpleasant smells.

### pH Value

The core technology with the curly fibre acquisition layer helps to guarantee a low pH which is similar to the skin. This helps to protect the skin and ensures improved skin health.

### Breathable

The breathable material enables the skin to breathe, which contributes to improved skin health.

Attends Flex are tested and approved by proDERM, Institute for Applied Dermatological Research.
